everything perfect right this should be mine after video submission right ?

Worked for 42s >

Bro, I checked the actual uploaded AFTER video. It is not the one I would submit yet. The program itself is perfect, but the video evidence is not ideal enough for a strict full-marks submission.

What is good

The video is **10.87 seconds**, and it clearly shows the finished behavior:

```
Easy
enter 4 digits from 1 to 4
4444
Exact: 2  Partial: 0
History:
1. Guess: 4444 | Exact: 2 | Partial: 0
```

That is excellent evidence for:

- Difficulty selection
- Task 1 duplicate bug fixed
- Task 4 history
- Correct feedback

What is not ideal ❌

The beginning of the video contains:

```
rm -rf /s /q __pycache__
git status
git log --oneline -4
git status
```

and only afterward starts the game.

The handout specifically asks for a **10-second video of gameplay after the changes**.

Lab_4_VibeCoding_Student_handou...

So although the file is 10.87 seconds long, the **gameplay portion itself is much shorter than 10 seconds**.

For a submission where we're aiming for maximum marks, I would absolutely redo it.

Make the PERFECT AFTER video

1. Get the game ready BEFORE recording

In CMD:

```
cls
```

Then:

```
python -c "import random; random.seed(0); from game import Mastermind; Mastermind().run()"
```

You should now see:

```
Choose difficulty:
1. Easy
2. Medium
3. Hard
Select difficulty >
```

Don't start recording yet.

2. Start your screen recording

Now start recording.

Wait about **1 second**, then enter:

1

Then:

4444

You will get:

```
Easy – enter 4 digits from 1 to 4.  
10 turns left > 4444  
Exact: 2  Partial: 0  
History:  
1. Guess: 4444 | Exact: 2 | Partial: 0  
9 turns left >
```

3. Leave the result visible

Do **nothing** for another 2–3 seconds.

Aim for roughly:

10–12 seconds

of **actual gameplay**.

Your final video should basically contain only:

```
Choose difficulty:  
1. Easy  
2. Medium  
3. Hard  
Select difficulty > 1  
  
Easy – enter 4 digits from 1 to 4.  
10 turns left > 4444  
Exact: 2  Partial: 0  
History:  
1. Guess: 4444 | Exact: 2 | Partial: 0  
9 turns left >
```

That's much stronger evidence than the current recording.

Don't include `git status` , `git log` , `rmdir` , or other **Git** commands in the final **AFTER** video.

Once you record the clean version, upload it here and I'll check its duration and frames before we call the video final.

Sources

Yep bro — the **four commits** are exactly right. ✓

Your log is perfect:

```
c9e8b2e Add readable guess history
81a6d07 Add difficulty modes
ccc5fff Complete game lifecycle
227d6a9 Fix duplicate-aware feedback
```

The **only issue right now** is the newly generated `__pycache__`. Don't push with that untracked.

1. Remove it

Run:

```
rmdir /s /q __pycache__
```

Then:

```
git status
```

It must say:

```
nothing to commit, working tree clean
```

2. Push the completed code

Then run:

```
git push origin main
```

```
.
```

After that:

```
git status
```

We want:

```
Your branch is up to date with 'origin/main'.  
nothing to commit, working tree clean
```

3. Don't create the Lab-4 folder yet

Your repository code is now finished. The handout requires the Lab-4 submission folder with the before/after videos and chat history, while the README describes the three submission items as the before video, after video, and complete LLM chat-history link.

Lab_4_VibeCoding_Student_handou...

Once the push succeeds, we'll set up that final submission folder carefully without accidentally committing temporary files.

Send me the output after:

```
rmdir /s /q __pycache__  
git status  
git push origin main  
git status
```

Sources

```
C:\Users\prasa\20_mastermind>git status  
On branch main  
Your branch is ahead of 'origin/main' by 4 commits.  
(use "git push" to publish your local commits)  
nothing to commit, working tree clean  
C:\Users\prasa\20_mastermind>git push origin main  
Enumerating objects: 15, done.  
Counting objects: 100% (15/15), done.
```

Delta compression using up to 18 threads

Compressing objects: 100% (12/12), done.

Writing objects: 100% (12/12), 334 KiB | 170.00 KiB/s

Worked for 12s >

Yes bro. The actual code is now safely on GitHub. ✓

Your final Git check is perfect:

```
main is up to date with origin/main
nothing to commit, working tree clean
```

So do not touch the source code anymore.

Next = create the Lab-4 submission folder

The handout says the submission should contain the before/after videos, updated code, and chat history under Lab-4 ; it also says no PR should be raised to the SETAPESU26 main repo. Lab_4_VibeCoding_Student_handou...

Your GitHub repo already contains the updated code, so we only need to add the evidence folder.

1. Create the folder

From:

```
C:\Users\prasa\20_mastermind>
```

run:

```
mkdir Lab-4
```

2. Put the videos there

Use these final names:

```
Lab-4\
├─ before.mp4
├─ after.mp4
└─ chat-history.pdf
```

Important: I checked the video files currently available to me. The final AFTER recording is about **10.87 seconds**, which is good. The earlier BEFORE recordings available here are **4.7 s** and **8.27 s**, so I do **not** want you to submit either of those without confirming which one is your final ~10-second BEFORE recording.

So don't copy the BEFORE video yet.

3. Chat history

Your README says the complete LLM chat history must be included, and the handout says chat history should be exported as a **doc/PDF**. Lab_4_VibeCoding_Student_handou...

You should export this **entire Vibe Coding conversation** and save it as:

chat-history.pdf

Do not create a shortened summary—the assignment specifically asks for the complete history.

4. Don't commit the Lab-4 folder yet

We'll first verify:

before.mp4 ☒ correct final BEFORE
after.mp4 ☒ 10.87 sec final AFTER
chat-history.pdf ☒ complete conversation

Then we'll commit the submission folder and push it.

So your next action is just: confirm which video is your final BEFORE recording. The files currently visible to me are:

Recording 2026-09-30 083725.mp4 4.70 sec
Screen Recording 2026-09-30 084123.mp4 8.27 sec
Screen Recording 2026-09-30 224612.mp4 10.87 sec ← AFTER

I don't want you submitting the wrong BEFORE file.

how to get this pdf bro

Bro, if you mean the **complete LLM chat-history PDF**, easiest way is directly from this ChatGPT conversation.

Method 1 — Browser → Save as PDF

1. Stay on **this exact conversation**.
2. Scroll through the conversation and make sure the earlier messages are loaded.
3. Press:

Ctrl + P

4. In the print window, select:

Destination → Save to PDF

5. Choose **More settings** if available and keep the normal/default layout.
6. Click **Save**.
7. Save it as:

chat-history.pdf

Important ⚠

Don't make a summary or manually copy only the important messages.

Your assignment asks for the **complete LLM chat history**, so the PDF should contain the conversation showing how you worked through Tasks 1–4.

Then put it inside:

```
Lab-4
|
├─ before.mp4
├─ after.mp4
└─ chat-history.pdf
```

If Ctrl+P doesn't include the whole conversation

Tell me what you see in the print preview. **Don't submit the PDF yet.** I'll help you get the complete history properly.

ChatGPT can make mistakes. Check important info.
